PEAK III 3-Pack Flash Drive allows more orderly file-management

3rd April 2008

PEAKHARDWARE International Co., Ltd. (PEAK), one of Taiwan's leading suppliers of flash memory and related hardware products, has released the PEAK III 3-Pack Flash Drive in 1GB, 2GB and 4GB versions. Three PEAK III pen drives of the same capacity in one package.

"Taking the idea of goods marketed in multi-packs, we designed a 3-pack pen drive package for back-up besides the lower unit price", said Scott Shih, the Assistant Director at PEAK. "It is so important to back up your data in order to prevent any loss. Furthermore, our PEAK III 3-Pack pen drive set provides a useful way to store different documents or data orderly like a multi-layer shelf. Save your movies or pictures in one, store your assignments in another and keep your favourite music in the third. It saves you time to find a document in a messy set of folders and allows more orderly file-management."

As PEAK changes its packaging to smaller sizes, the PEAK III 3-Pack Flash Drive, by putting three pen drives in one package, decreases the usage of raw materials and saves valuable resources. In addition to this new product, PEAK is planning to release another multi-pack product soon, the PEAK 2-Pack SecureDigital Card MLC, to provide more choice to users and save the environment.

PEAK has many more series of flash drives and all these series come with six categories of portable applications available to download free from the PEAK website. The software includes security, recovery, audio & video applications and many more.
