PEAK Releases New 9800GT Green Edition

15th June 2009

PEAKHARDWARE International Co., Ltd. (PEAK), one of Taiwan's leading suppliers of flash memory, VGA cards and related computer peripherals, launches its new "green edition" graphics cards: the 9800GT 512MB and 1024MB. These green edition VGA cards will satisfy the requirements of lower power consumption and more environment-friendly components by computers in heavy use over a long period of operation.

The new models use the advanced 9800GT GPU and deliver all the performance of their predecessors. When two PEAK 9800GT graphics cards are fitted in pairs in order to boost video performance, no hardware link is required, as they use software SLI to share the graphics processing. There is no extra power connector required on the cards; this avoids the problems found with PCs without a spare power connector and lower power supply capacity. The improvements also make the installation of the 9800GT green edition easier.

"We at PEAK have been continuously working for green products," said Albert Tung, PEAK's Product Manager. "The development of green products is important; not only for environment-friendly and power-saving reasons, but also for cost-saving during this period of recession. Many computers are kept operating all day long in offices, schools and internet cafes. If we can save 20% of the power consumption of those computers, the saved power will be huge."

PEAK provides a complete range of VGA cards with a choice of ATi and nVidia chipsets. For more information about the PEAK VGA cards and other PEAK products, please visit the PEAK website: www.peakhardware.com.

VIP Computers offers these PEAK 9800GT Green Edition VGA Cards:

- PEAK GF 9800GT 1024MB DDR3 256Bit – VIP Code 8279
- PEAK GF 9800GT 512MB DDR3 256Bit – VIP Code 4745
