PEAK Launches PEAK GeForce 9600GT 512MB

31st March 2008

PEAKHARDWARE International Co., Ltd. (PEAK), one of Taiwan's leading suppliers of computer components, peripherals and related hardware products, launches its latest high-end video graphics card, the PEAK GeForce 9600GT 512MB, based on the outstanding new 9600GT GPU from NVIDIA and equipped with two Dual-Link DVI display outputs, totally extending the usability of the graphics card.

The PEAK GeForce 9600GT is powered by NVIDIA's new 9600GT GPU with 512MB of embedded DDR3 memory. Its high-speed GPU clock speed of 650 MHz and the extreme RAM clock speed of 900 MHz produce an amazing leap forward in video processing performance. While matching the speed of PEAK's other high-end graphics cards, the PEAK GeForce 9600GT, with two Dual-Link DVI outputs, supports up to 2560 x 1600 resolution display and enables PCs to connect two monitors simultaneously, providing dual-screen enjoyment for users.

The new card uses the latest PCI Express 2.0 interface, allowing up to twice the throughput of PCI Express 1.1, and the built-in native NVIDIA SLI technology allows two graphics cards to be used in a single PC, increasing graphics performance by a factor of up to 2X.

By adding a PEAK GeForce 9600GT video adapter card to their PCs, users can experience the amazing visual effects and enhanced interactive game processing provided by the advanced technical features incorporated into these outstanding cards.

PEAK produces both NVIDIA and ATI graphics cards. For full details of all PEAK graphics cards, please visit our website at www.peakhardware.com
