PEAK Launches PEAK V Flash Drive in Downsized Packaging

18th November 2009

PEAKHARDWARE International Co., Ltd. (PEAK), one of Taiwan's leading suppliers of computer components, peripherals and related hardware products, today launches the PEAK V. This new flash drive series has a downsized packaging which reduces the raw materials consumption by up to 15%.

"The PEAK V flash drive series is available in capacities ranging from 4GB to 64GB. The special design for cap retention at the end of the casing can hold the cap securely without getting lost. The rolling grooves on the black casing with a matt finish make the PEAK V more stylish," said Albert Tung, PEAK's Product Manager.

To reduce the consumption of raw materials, in order to decrease the greenhouse effect, PEAK reduced the packaging of the PEAK V flash drive for environmental protection. The new package provides the same protection, but with lower usage of raw materials. On average, the downsized packaging reduces carbon dioxide emissions during production and transportation by the equivalent of 18,000 trees per year. The PEAK V flash drive supports USB 1.1/2.0 and includes data security, boot-up mode and resizing of the secure partition. All series of PEAK flash drives carry a lifetime warranty and come with six categories of portable applications available to download free from the PEAK website.
