

GeIL Launches First Ever Memory Detection Meter Powered by 3DMark®

Taipei, Taiwan – Dec 4, 2009 – GeIL today announced a new partnership with Futuremark® Corporation in co-effort to introduce to the market the GeIL Memory Meter live on GeILs’ official global site: www.geil.com.tw.

This performance meter auto detects current system memory usage and recommends GeIL upgrade options based on the users motherboard, CPU, and VGA configuration. <http://www.geil.com.tw/configurator/global>

“We’re delighted to be partnering with Futuremark to support PC power users and overclockers everywhere with this new interactive Memory Meter, making memory upgrade selection easy and fun.” said Hank Cheng, Marketing Manager at GeIL.

You are also welcome to check out Futuremark’s Pressroom on their site for related PR for the GeIL Memory Meter: <http://www.futuremark.com/pressroom/pressreleases/56945/>

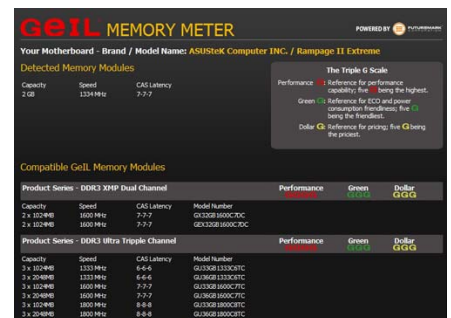

Follow the easy instruction, to use the GeIL Memory Meter is as easy as 1,2,3:

Step 1: Click on the “Scan Your Computer” button (red arrow).

Step 2: Click on the “Install” button (red arrow).

Step 3: The result page will show all compatible GeIL memories with your current system with rating references for performance, eco-friendliness and pricing.
